

ANZSCoS 2021 – Pre-Conference Workshop - Ventilation Wednesday 27 October 2021 – 10:30AM - 12:30PM (AEDT)

Ventilation Workshop Overview

The chronic spinal cord population and the need for home ventilation or long term weaning following CAP or HAP or as a result of intubation post planned procedure.

In this workshop we attempt to answer some questions regarding the acute interface with medical, physio, nursing, occupational therapy, community providers and funders.

What challenges are posed in these circumstances for this population of patients and healthcare professionals?

What future does diaphragmatic pacing or phrenic nerve stimulation have for these patients. What is involved in the set up and ongoing requirements?

TIME (AEDT)	SPEAKER NAME	PRESENTATION TITLE
1030 -1035	Maria Van Den Heuvel Session Chair	Welcome, session introduction, objectives and anticipated outcomes of this workshop
1035 -1115	Dr Raymond Onders	Diaphragmatic pacing and neuromodulation for acute patients
