

Associate Professor Nesrin Varol - When and why should I have a laparoscopy?

Women with endometriosis can suffer debilitating chronic pelvic pain. However, if endometriosis is diagnosed early and well managed in a holistic manner with a team of professionals, women are able to lead a normal and healthy life.

Endometriosis can develop at menarche and hence pelvic pain in teenage girls especially, requires serious consideration of the diagnosis of this condition.

Decisions regarding the optimal management of pelvic pain and endometriosis are best made after discussion of all the options with a woman.

Treatment is specific to and different for each woman.
